Pablo Pythow's Color Challed 65

How many animals can you find that have a color in their name? There are the Great Blue Herons and Red Pandas and Green Frogs. How many animals can you find that are just one color? Two colors? Many, many colors?

This is your challenge at the zoo -

When you see an animal that has **one of your team colors**, your team scores **one point**,

When you see an animal that has many colors, including both of your team colors, you score two points.

If you see an animal that has **only your team's two colors**, you score **three points**.

And for when you find an animal that has one or both of your team's colors in its name, you score five points.

Good Luck!
